Parmaarth Infratech Pvt. Ltd.

(PIPL)

ISO 9001:2015 Certified Company

Empowering Progress, Inspiring Purpose

About Organization…..

Parmaarth Infratech Pvt. Ltd. (PIPL) delivers integrated civil, electrical, Advanced Metering Infrastructure and renewable energy projects under one execution umbrella.

We operate with an EPC + O&M mindset: survey, design, build, commissioning and maintain. This ensures accountability, performance and lifecycle reliability for the client.

Headquartered in Pune, we support government departments, municipal corporations, industrial clients and housing infrastructure across Maharashtra and beyond.

Vision | Mission | Values

Vision – Building a Sustainable Future

We aim to enable infrastructure that is safe, efficient, electrified and climate-aligned.

Mission – Driving Progress and Prosperity

We deliver measurable impact for communities, utilities and industry through reliability and speed of execution.

Values – Customer Focus, Innovation, Trust, Continuous Improvement

We work with transparency, modern tools and strict compliance at every site.

Capabilities & Strength

Experienced Workforce

150+ trained workforce, 25+ site supervisors and 10+ qualified engineers capable of safe electrical work, civil execution and solar commissioning.

Execution Discipline

Structured project planning, documentation, daily reporting and escalation control to meet milestones without compromising safety.

Quality & Compliance

We align with utility standards, electrical inspectorate norms and municipal regulations from day one of mobilisation.

Sustainability Mindset

We integrate solar, energy efficiency and responsible asset lifecycle management into traditional infrastructure work.

Organization Structure

PIPL

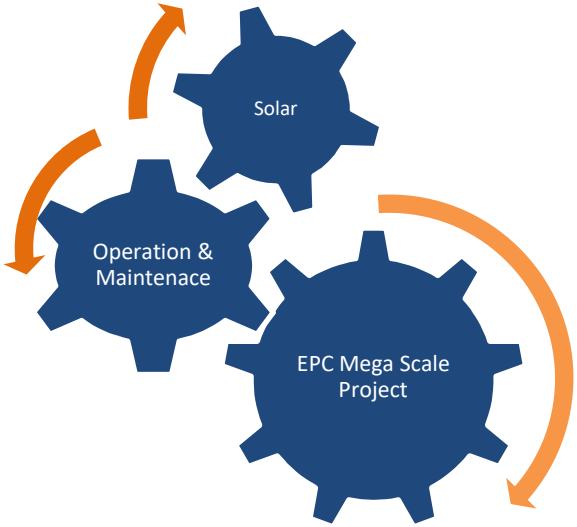

Renewable Division

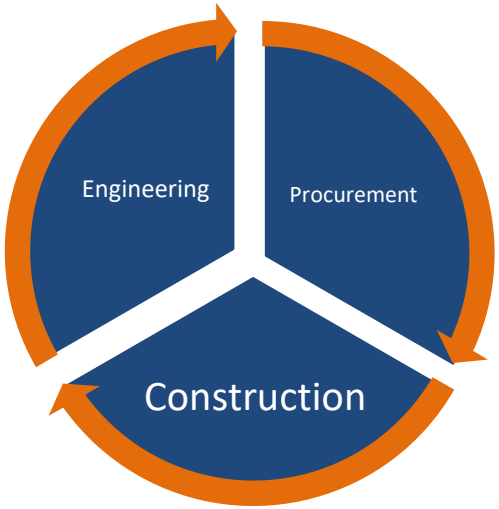

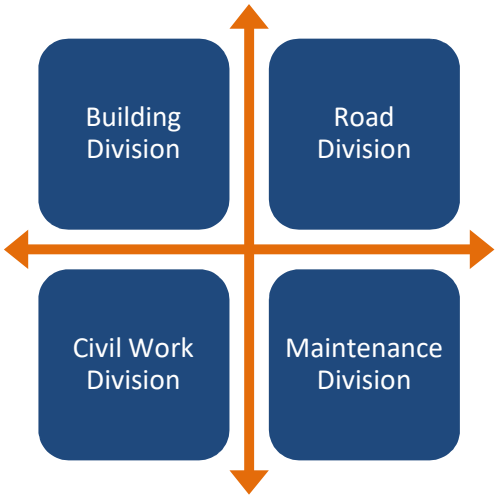

Electrical EPC Division

Civil Infrastructure Division

Key Services

Civil & Structural Works

Residential, commercial, institutional and industrial buildings including foundations, RCC, finishing and compliance clearances.

Roads & Bridges

Development, strengthening, resurfacing and maintenance with attention to drainage, safety barriers and durability.

Electrical Infrastructure

Substations, transformers, switchgear, HT/LT cabling, earthing and distribution network reliability improvements.

Smart Metering / AMI

Consumer metering upgrades, compliant installations, digital data capture and loss-reduction support for utilities.

Solar EPC

Ground-mounted MW-scale plants and rooftop net-metered systems, including design, procurement, installation and grid synchronisation.

O&M Services

Preventive and breakdown maintenance of power distribution, solar assets and civil infrastructure post-handover.

Compliance & Certifications

Company ID (CIN): U41001PN2024PTC230231

GST / PAN: 27AAOCP6697F1ZO | AAOCP6697F

PF Registration: PUPUN3261563000

PTRC / PTEC: 27452340747P | 99724837694P

ISO & Government Approvals: ISO 9001:2015 Certified | Govt. Approved Electrical Contractor

Safety & Compliance: All projects executed with safety protocols, documentation trails and adherence to regulatory norms for electrical.

Empowering Progress, Inspiring Purpose

Tools, Machinery & Logistics

In-house Plant & Tools

Concrete mixers, compactors, scaffolding, lifting hoists, portable generators, calibrated electrical testing kits and total station survey instruments.

Own Mobility & Storage

Commercial vehicles, secured site containers and material handling equipment allow rapid deployment and better cost control.

Safety Systems

Certified PPE, work-at-height training, fire drills, toolbox talks and daily site inductions are embedded into operations.

Documentation

We maintain site logs, inspection checklists and asset registers that support audits, billing and statutory compliance.

This is how we stand out from the crowd…..

25+ years of Construction Experience
Our team has extensive experience in executing structural modifications and upgrades with precision, ensuring minimal disruption to existing infrastructure and maintaining high standards of construction quality and accuracy

Advanced Training Programs:
Continuous training programs for our technicians and supervisors to keep them updated on the latest industry standards and technologies in smart metering.

Young & Experienced Team
We have team mix – who are young and experienced, enthusiastic and specialised in their jobs, both off field and on field

Customer-Centric Approach
Dedicated customer support team to handle inquiries, provide guidance, and address issues during and after the installation process, ensuring high levels of customer satisfaction.

Highly Skilled Workforce
We have over 150 dedicated technicians, 25 field supervisors, and 10 graduate engineers, all trained in the latest smart meter technologies and installation practices.

Finest Installation Method
Utilization of modern tools and equipment for precise and safe installation of smart meters, ensuring high-quality workmanship.

Comprehensive Project Planning
Detailed planning and scheduling to ensure efficient and timely replacement of meters, minimizing downtime and maximizing efficiency.

247 C
We provide all range of solar solutions - be it KW or MW, grid connected to distributed

Notable Project

Sl. No	Name of Project	Cost (in Million)
1	Construction and civil works for the new Administrative Building of Pimpri Chinchwad Municipal Corporation (PCMC)	75
2	Implementation of Advanced Metering Infrastructure (AMI) as part of the project awarded by Adani Energy Solutions	55
3	Solar Pumping Work- Kusum Part B through Ultech Energies	40
4	Construction of civil infrastructure at Electronic Manufacturing cluster Ranjangaon Industrial area, Phase-III	35
5	Construction of Water Treatment Plant 1.5MLD under shetphalgade water supply scheme by customer Devsaru Developers & Builders	30
6	MSEDCL net Metering-PM Suryaghar Scheme by Govt of India	15
7	EPC 100KW Solar Project of Pimpri Chinchwad Municipal Corp.	10
8	Expansion of Industrial 500kw Solar Project of 15MW Finolex Cable Plant Pune trough subsidy company.	60

HSE Implementation at Project

Thank You

We look forward to partnering with you on sustainable, compliant and future-ready infrastructure.

Parmaarth Infratech Pvt. Ltd. (PIPL)

Open Access for C&I Consumers

We enable commercial and industrial consumers to source electricity directly from approved renewable energy generators through Open Access.

This model allows large consumers to reduce per-unit power cost, manage tariff risk and visibly lower Scope 2 emissions — without owning the plant.

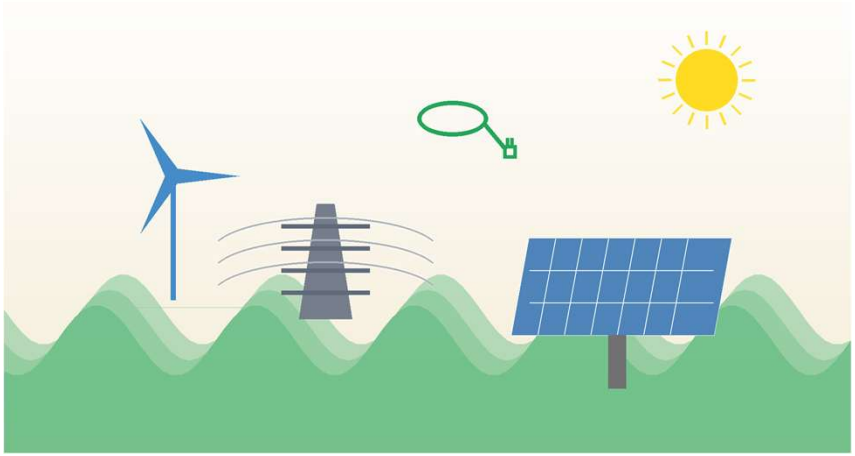

PIPL supports policy alignment, coordination with DISCOM/SLDC and technical readiness (metering, interconnection, billing formats).

Green Open Access (from 100 kW)

Under Green Open Access, consumers starting from ~100 kW connected load can contract green power with regulatory support for renewable sourcing.

This is especially relevant for ESG-focused industries who must demonstrate decarbonisation and report sustainability KPIs. We assist in structuring commercial terms, technical feasibility and compliance with applicable state and central guidelines.

Virtual Net Metering (CHS in Metro Cities)

VNM allows a single solar plant — rooftop, podium, or nearby plot — to serve multiple flats in a housing society.

Each member receives bill credit for their allocated share of the generation, even if they do not have panels on their individual balcony/terrace.

This enables dense metro housing societies to adopt solar collectively, improve energy independence and reduce monthly utility bills.

O&M of Distribution Network

We take responsibility for reliable operation and maintenance of HT/LT electrical distribution assets for utilities, campuses and housing clusters.

Scope includes preventive inspections, load balancing, earthing audits, thermal checks, and rapid fault attendance and restoration.

We maintain safety logs, statutory records and performance reports to ensure regulatory compliance and long-term asset health.

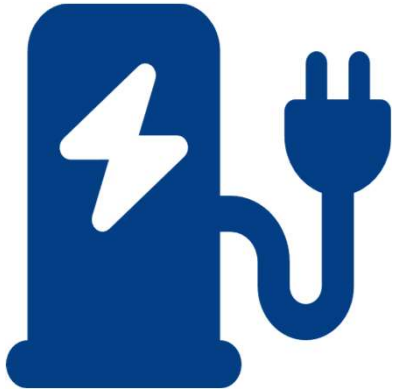

EV Charging Infrastructure

We plan and deploy AC and DC fast chargers for housing societies, commercial hubs, industrial fleets and highways/expressways.

Our approach covers connected load assessment, charger sizing, foundations, cabling, safety interlocks and commissioning.

Smart metering, billing integration and energy accounting are built in to support future-ready e-mobility ecosystems.

Turnkey Power Projects

We deliver complete EPC solutions for substations, HT/LT networks, and solar-linked power systems: design, procurement, construction and commissioning.

Clients benefit from single-point accountability on safety, schedule, budget and statutory approvals until handover.

Our team also supports post-commissioning performance validation, documentation and readiness for audit/regulatory inspections.
